ABOUT US

Yarana Provide Pakistan's Best Weaving Services!

Yarana textile mills was formed in 2019 to bring sustainable innovation in Pakistan's textile industry. With a passion-driven aim we manufacture grey fabric, processed fabric, and processed bleached printed and dyed home textile products to cater global and local markets.

Located in Karachi, the hub of Pakistan's textile industry, we have access to the finest production material, the latest machinery, and a dedicated workforce that helps us achieve our goals.

OUR VALUES

Yarana Textile Mills Prioritizes

Customer Satisfaction & Success

Providing quality services to bring precision to your products.

Passion & Productivity

Dedication towards our mission to reach common business goals.

Responsibility towards the planet

Committed to giving back.

Pursuit in excellence

Clarity on a purposeful mindset.

WHAT WE DO

Production Process

Woven Fabric

Yarana Textile Mills holds expertise in dealing with woven fabric. From exquisite colour of yarn transformed into exemplary rolls of fabric, the intricate production process is known as weaving. With the skills of our employees blending with the highest quality raw material and imported weaving jets, Yarana Textile Mills produces the finest fabric in Pakistan. Our futuristic facility consists of element that are required by every modern textile mills-smarter performance, less energy consumption & data-driven production.

6 Unique Steps

The process of weaving starts off with winding the yarn to set the base for a quality result. Warping and sizing are the next steps to strengthen the yarn's performance for weaving, with drawing in as the fourth step of the whole process. Drawing in takes place to create a variety of structures in order to determine the movements of the yarn during weaving. Once the yarn goes through the hi-jet weaving machines, the final product rolls out in the form of greige fabric.

Final Product - Greige Fabric

Yarana's products stand out amongst every other and this excellence is achieved through our utmost dedication to specialize in greige fabric production. The fabric that comes out of our weaving looms in a remarkable canvas for our customers to develop their own prints, colour and patterns on.

Yarana Textile Mills

YTM has planned to install 400 air jet looms Picanol Omni 800 Plus for which 45 acre land has been acquired. At initial stage 84 looms has been installed and started to produce approx 1.4 million meter greige fabric per month with the combination of state of art weaving equipment technical know how and managerial expertise.

- ✔ Ottomans (Single / Double Picks)
- ✔ Blinder Fabrics
- ✔ Abrasive Fabrics
- ✔ Interior Fabrics

Textile Testing

Textile testing remains the heart of fabric production at Yarana to ensure the longevity of our products.

Lab Tests for Woven Fabric

From extensive research on our raw material to final inspections of our fabric, Yarana's laboratory conducts cotton, yarn, and fabric tests in different stages. Our production facility is well equipped with advanced fabric testing machinery that assists our researchers in assessing the cotton used for production that later comes out as grey-processed fabric.

The Three Trial Stages

Cotton, yarn & fabric testing, help us rule out the elongation and strength levels of the yarn used for the grey fabric. Yarana Textile Mills remains firm on its quality control protocols and conducts further tests on the cotton & yarn's fiber properties which provides us a detailed insight into the output. The concluding step of this process consists of analyzing the final product. Under the categories of performance, strength, colour-fastness, and dimensional stability tests, we successfully deliver the quality fabric we guarantee for our customers.

Cotton Tests

Cotton test also known as a fiber test, is conducted to analyze different properties of the raw cotton.

Yarn Tests

The outcomes of the cotton tests is represented in the yarn produced by it.

Fabric Tests

Various factors of fabric testing are taken into account once the final products come out of the weaving looms.

Home Textile

We offer a diverse product range of home textile products with our expertise, technical know-how and hands on experience in this product category. Yarana Textile is well equipped to service valuable home textile buyers all over the world. Our extensive quality control and lead time monitoring systems coupled with a team of highly experienced and motivated professionals ensure that the desired product is shipped to the customer right on time.

Healthcare Textile

Our products range for healthcare textiles is designed to meet the stringent requirement demanded by Hospitals, Nursing & Care Homes.

Hospitality Textile

Our hospitality range of bed linen is the deluxe, utilizing fine yarn and top quality finishes to give a luxurious appearance and feel. Our products are preferred choice of luxury hotels and exclusive establishments. Our hotel linen consists of very strong fabric, stands for iron bowl laundry washing (50-80) times washes.

Workwear Textile

We specialize in making Workwear Fabric, one of our speciality is flame retardant techniques. Covering semi durable & non permanent flame retardant standards.
