

STITCH AND STYLE

INTERNATIONAL

Company Introduction

Stitch and Style International based in Faisalabad, Pakistan is one of the leading clothing manufacturers and exporters of Pakistan. We are based in Faisalabad which third largest city of country and famous around the globe for its clothing and textiles exports to the world.

We gained our customers confidence and trust with our consistency on product quality, timely delivery and most important through our services. We are a 10 line factory having 254 sewing machines under the covered area of 115,000 Sq Ft with a monthly production capacity of around 350,000 units of fine quality garments for a product mix of Tees, Polos, Tank Tops, Boxers, Briefs, Bikinis, Sports Bras, Hoodies, Sweat Shirts, Jackets, Trousers, Shirts, Shorts, Trousers, masks Etc.

We are a permanent corporate class member of Faisalabad Chamber of Commerce and Industries vide membership # 1116364-10254. We are also listed with Federal Board of Revenue, Govt. of Pakistan vide Registration # 5123522-2 and with Directorate of Labour Welfare, Govt of the Punjab through Reg No. 2023010801459.

Virtual Tour of the Factory

Vision Statement

- To become the best producer of readymade garments by supplying highest quality and services to its customers.
- To strive for excellence through commitment, integrity, honesty and team work.
- To develop a highly motivated and professional trained workforce that would drive growth through innovation and consistency.

Mission Statement

To be a dynamic, profitable and growth oriented company by providing good return on investment to all stake holders: quality products to its customers, a secured and friendly environment at work place to its employees and to keep maintaining country's good image in the international market.

Our Values

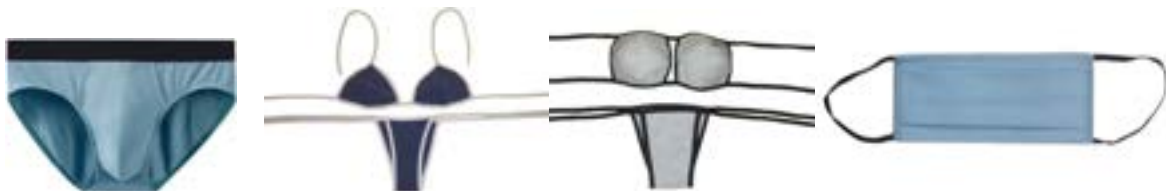

Customer Caring Mindset, Talent and Team work

Product Range and Capacities

350,000 units of a product mix of Tees, Tanks, Polos, Hoodies, Sweat Shirts, Boxers, Briefs, Bikinis, Trouser , Shorts etc.

Current Product Portfolio

Our Strengths

Buyer's satisfaction through customer care services, quality products with timely deliveries.

We are also in process of implementing a unique computerized barcode system that ensures quality on every operation of garment production. Each garment carries a bar-coded sticker that have the details and history of all the operations done on a garment. Hence, if any problem is reported, one can trace back the root of the problem to avoid re-occurrence in future. Stitch and Style will be the one and only apparel manufacturing company in Pakistan having this sort of system in place.

We are using Computerized Human Resources Management System based on employee's in/out through card swiping for wages and compensation/benefits calculation and payments.

Customers Portfolio:

We are exporting to our valued customers in North America, Europe, Asia and Africa.

Quality Monitoring Procedures

We define Quality as ultimate fulfillment of customer's requirements in the product, services and timeline. We have two divisions to monitor quality: Quality Control Department which is reporting to factory management and Quality Assurance Department reporting to the factory ownership for independent audits and to convey true reflection of quality being produced by factory management.

Quality Control:

During product manufacturing, we monitor quality of raw material and final product through inspections with focus on process improvement.

Fabric Inspection and QC Procedures:

Incoming fabrics are inspected at 4 Point system. 100% fabric is inspected by fabric QC's. Each fault is given points keeping in view the nature and intensity of the faults. 40 Points are allowed in 100 inspected yards. If number of faults/points exceeded than 40 points per 100 yard, the fabric roll is rejected. Lab test reports are also taken from fabric suppliers and verified through internal and third party labs as per requirement.

Accessories Inspection:

Accessories at the time of receipt in store are randomly inspected by QC's/concerned persons at least up to 10% of the received quantity.

Cut Parts Inspection:

100% cut parts are inspected before input to sewing section. The rejected components are replaced from remnants or removed. Cut parts are also inspected 100% before sending and after receipt from printing, embroidery, applique work etc.

Sewing Inline Inspection:

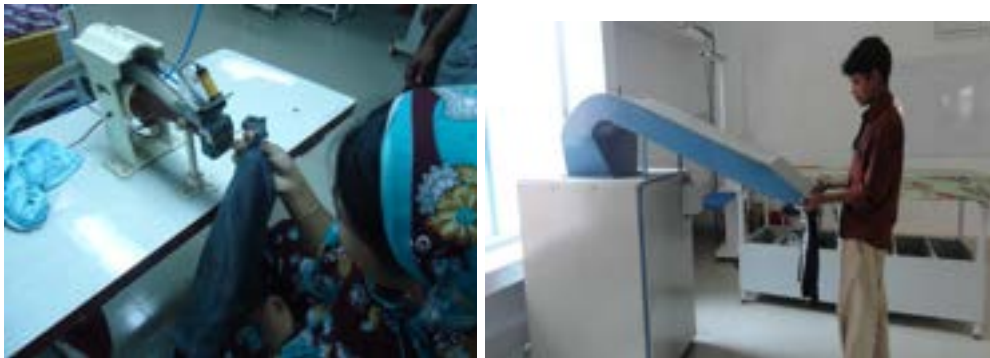

During stitching operations, the inspections are done on 7-0 System. Inline QC inspects 7 pieces randomly for each machine operator twice a day. If he finds any fault among these 7 inspected pcs, the Sewing operator has to inspect the whole bundle himself and offer inspection again to Inline QC. If the inspection is fault free, then this sewing operator will undergo follow up inspection of 03 consecutive bundles. If 03 Follow Up Inspections are ok, the Inline QC moves to next machine operator. If during 1st follow up inspection, the Inline QC finds any fault, then the said sewing operator has to go under 2nd follow up inspection. If the 2nd follow up fails then operator has to stop the work for two decisions to be made depending on the nature of the faults (either machine to go under maintenance or sewing operator to go for training or replacement).

Sewing End Line Inspection:

100 % garments are checked on sewing related faults after sewing completion. Both in and out sides of the garments are inspected.

Use of Auto Trimmer & Thread Sucking Machines:

We are using Auto Trimmers for clipping to avoid un-necessary clipping cuts during this process. We are also using thread sucker machines to ensure that packed garments are free from loose threads.

Final QC Inspection:

Garments are checked 100% on quality after pressing for fabrication, finishing, appearance, sewing, shading, labeling etc to make sure that quality garments are packed into cartons.

Measurement Specs Control:

Before packing, garments are 100% checked on measurements for critical measuring points.

Quality Assurance:

QA conduct daily random audits of cut parts during cutting process, inline audits during sewing. They also do Batch audits before garments are packed into polybags. Only QA passed garments are packed into cartons. Finished goods audits are also conducted when shipment is ready. All internal QA audits are done at AQL 1.50 Level II of military std. III. Quality Assurance Department is reporting to factory ownership for independent audits and to convey true reflection of quality being produced.

Compliance:

Stitch and Style International is totally a compliant factory. We have wages and overtime calculation through computerized Human Resources Management System based on employee's in/out data through employee's card swiping. Leave record is also maintained by system. All wages and compensation/benefits are paid in time and as per local law. Employees are hired irrespective of religion, gender, color and race. No worker is hired under the age of 18 years. We have Child Care facility, Fire hydrant system (including Fire Extinguishers and smoke detectors), Medical facility, Blockage free Aisles-Exits-Stairs, Pure Drinking Water Facility, broken needle log, worker's grievance log and needle detector etc. Regular fire drills are conducted to keep training more fire fighters. Have worker's participatory committee.

BSCI – Ready for it, can be done upon request of any BSCI member buyer.

WRAP – Ready for it, can be done upon request of any buyer.
